

Pre-Laboratorio #3

Electrónica Analógica

Integrantes:

- Jaime Iriarte
- Juan Felipe Penagos
- Sebastian De Valdenebro

Valores obtenidos en Simulación

Montaje 1

Ancho de banda 182.867 KHz

Vin = 1V

Vo = -5V

Av = -5 Nota de análisis: Esta ganancia se debe a un desface de 180° en el voltaje salida

Montaje 2

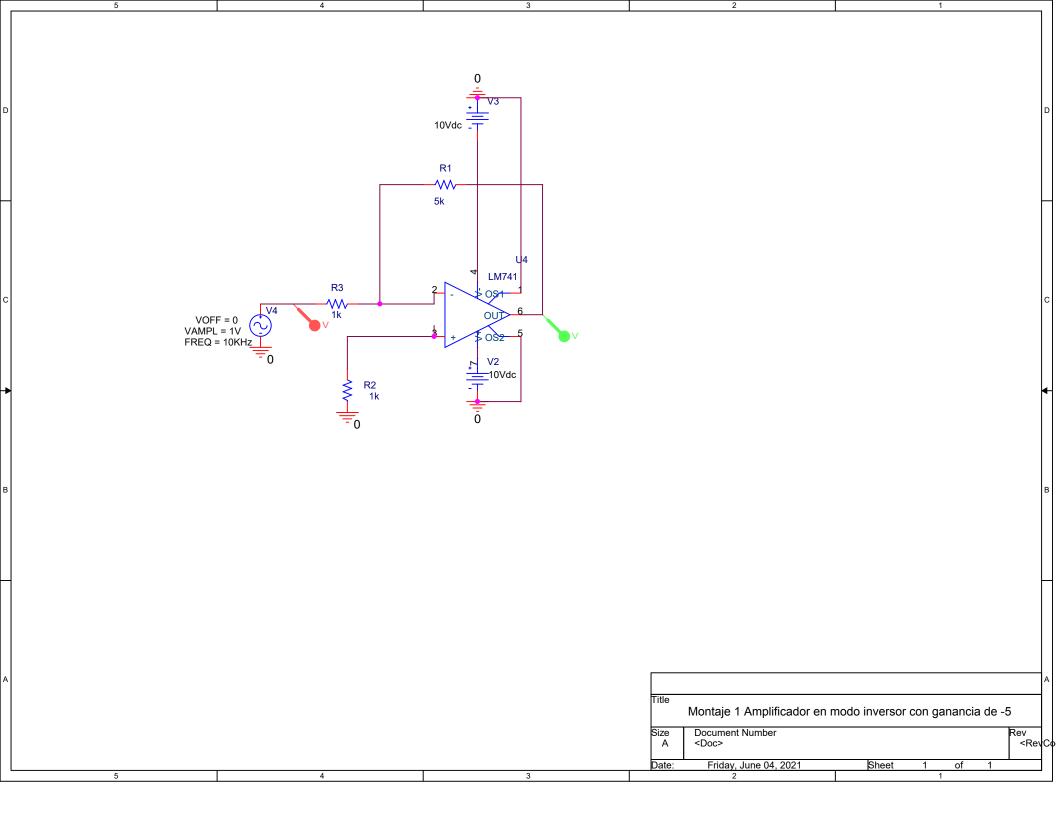

Ancho de banda = 223.622KHz

Vin1 = 1V

Vin2= 1V

Vo = -4V

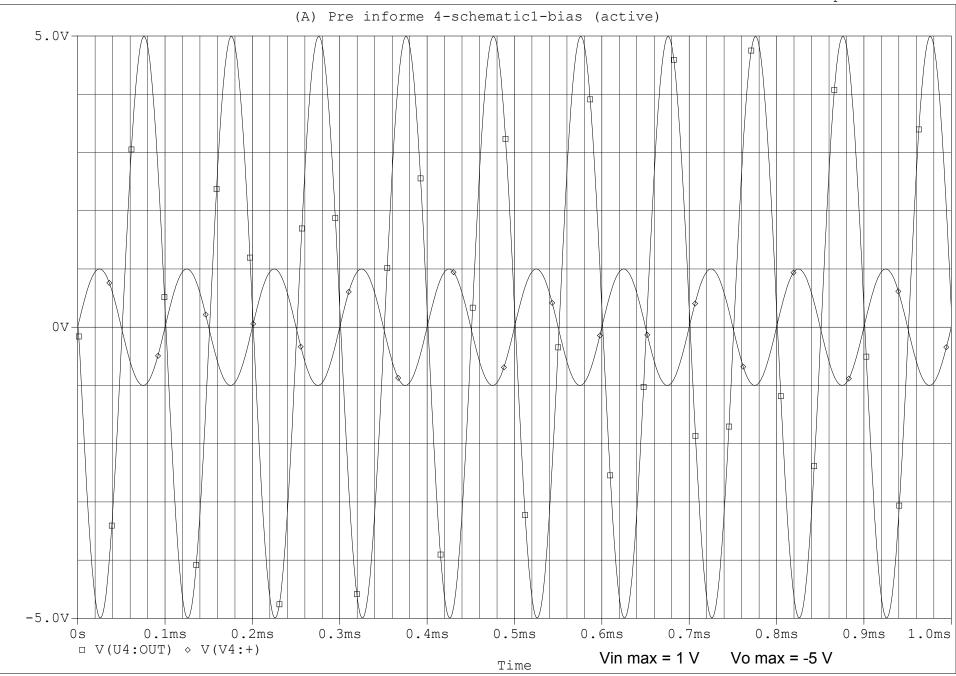

Av = -2

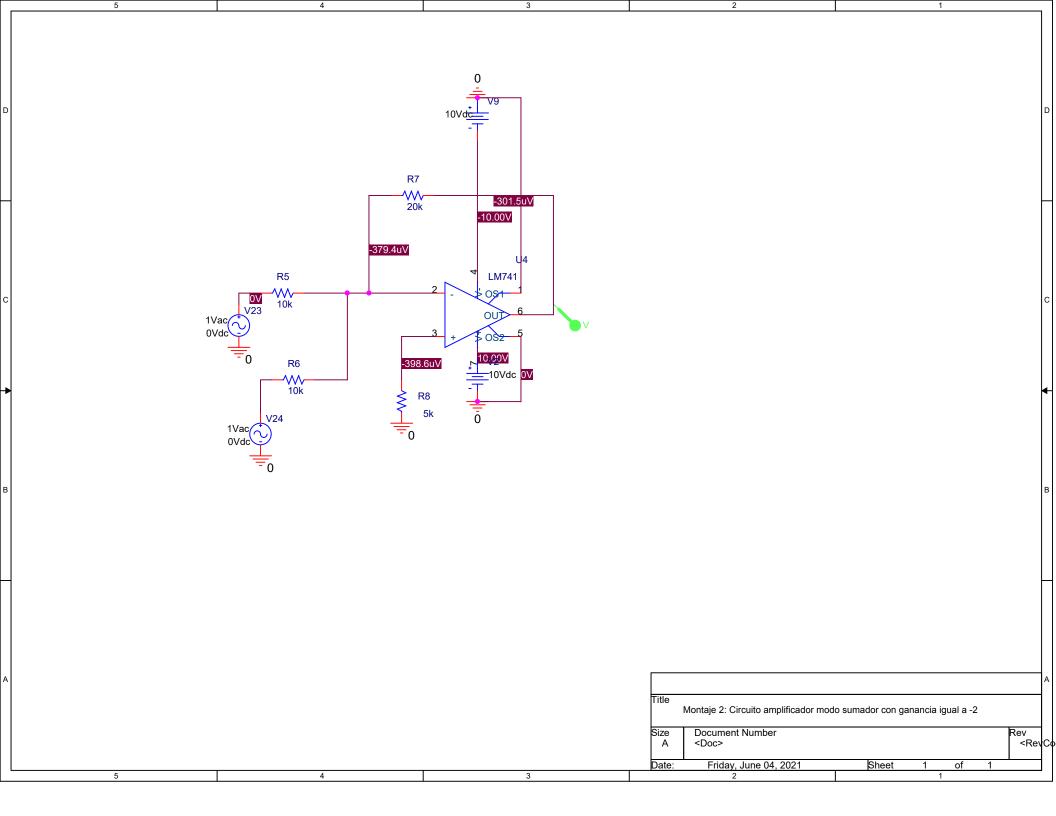

Análisis en frecuencia
